ServiceNow Integration

[EAM] ServiceNow Integration: Revised concept wave 2 - Mapping templates for CSDM

23

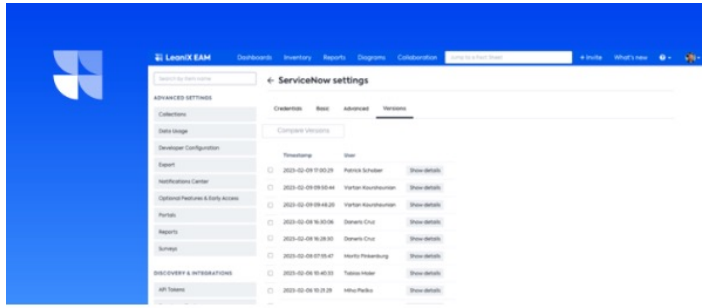
HANNAH ESSER | Posted on September 2022

Pre-defined mapping templates to choose from:

- Baseline CSDM compatible mapping presets based on best practices.
- Available within the "Basic" tab of the integration configuration UI.
- Mapping templates will be kept up to date with CSDM changes.

Mapping customizations and template management:

- Selected mapping configurations can be adjusted and saved as custom mapping.
- Simplification of saving, restoring and having multiple mapping templates for the integration.



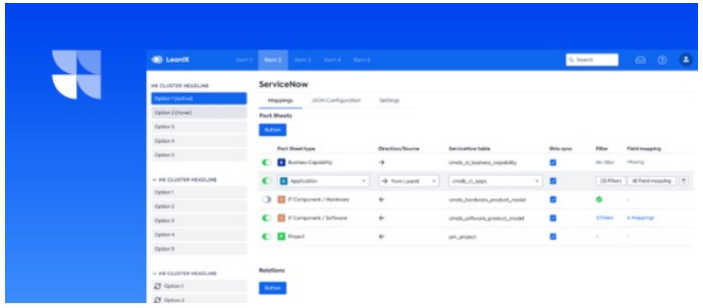
[ServiceNow] Configuration Versioning Management - 2023Q2

0

The goal of this quarter with our ServiceNow integration is to get our customers to successful synchronizations faster.
One capability we want to improve is configuration version management. We are aiming to develop solutions in the following areas:

- Showing previous versions
- Restoring a previous version
- Comparing versions

If you have specific needs around versioning, please leave a comment below!



[ServiceNow] Configuration Validation - 2023Q2

0

The goal of this quarter with our ServiceNow integration is to get our customers to successful synchronizations faster.
One capability we want to improve is our validation of the configuration. We are aiming to develop solutions in the following areas:

- Increase the smartness of our validation
- Improve our UI

If you have a specific validation you would love to see, please leave a comment below!

Search and Filtering

Now
- Make our GraphQL API and our Search future proof and better scalable
- Increase performance of search and filtering
- Ca. 50 % of Landscapes already use new API

Next
- Meet the team in Frankfurt
  - Experience OR Operators in a demo environment
  - Help us validate the future UX for Text Search

Later
- Complete the OR filtering across the platform
- More functionality in searching and filtering

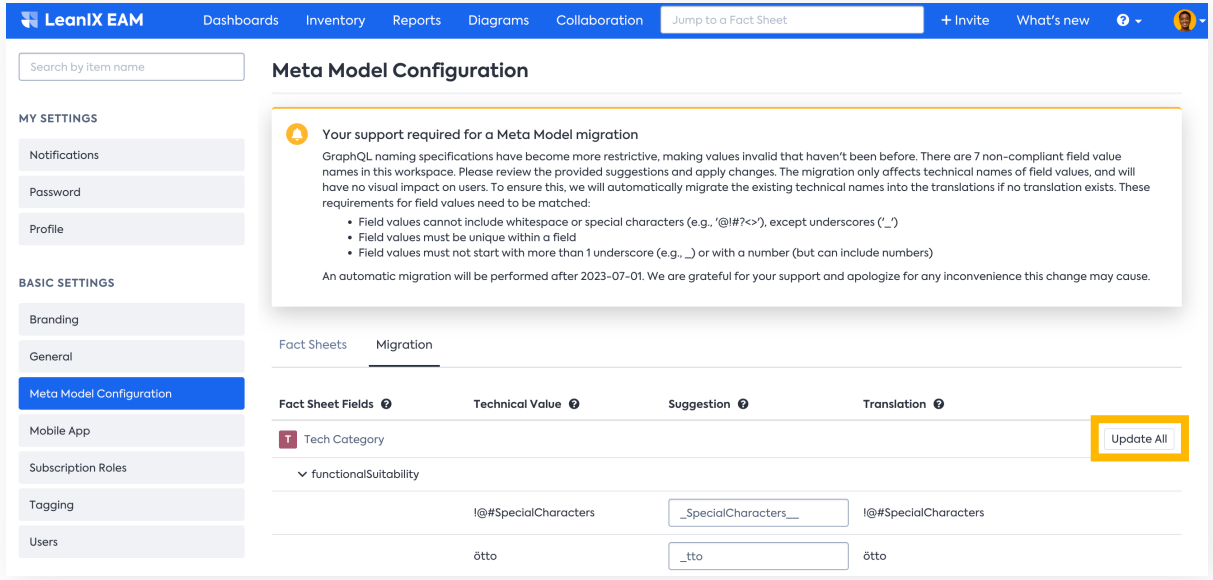
UX = User Experience

Migrate invalid field values in Meta Model

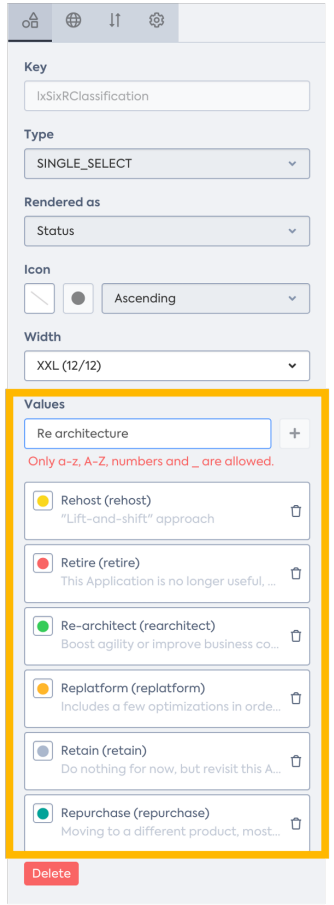
A change in GraphQL speficifations require your support to keep LeanIX EAM and its API up to date.

Update technical values of single- and multiple-select fields in your Meta Model Configuration by replacing white spaces, special characters, etc.

Notification and recommendations available in affected workspaces.



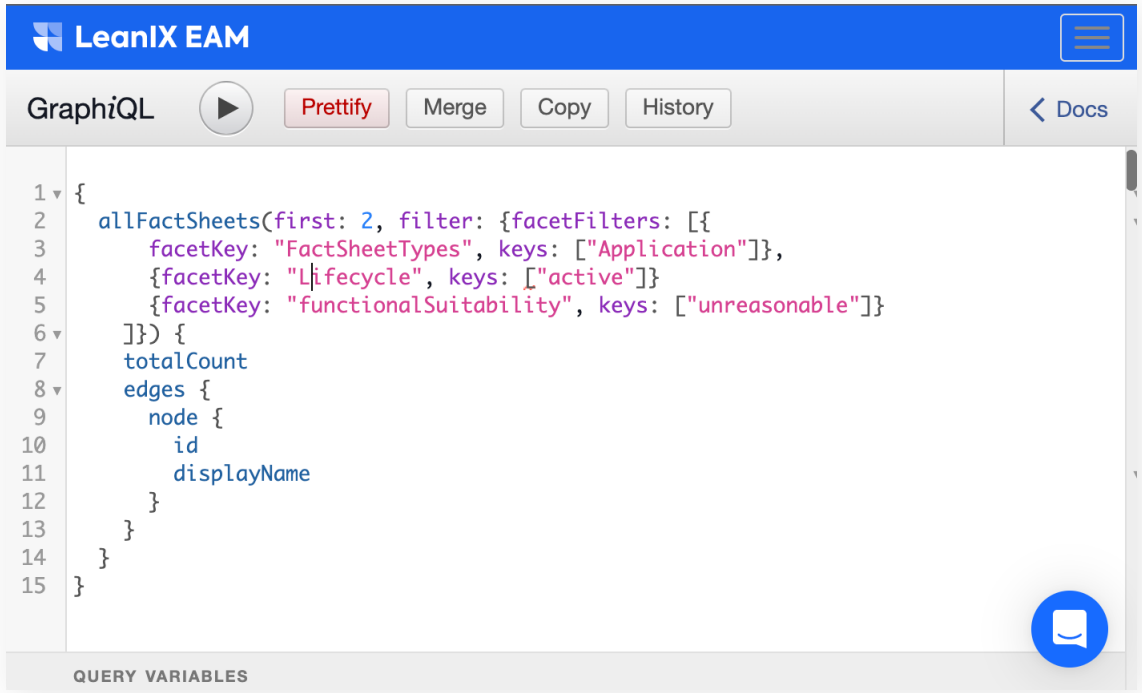
Migrate invalid field values in Meta Model



- Only the technical values of field names are affected without visual impact on users
  - Automatic transfer of existing technical names into the translations if not existing.
- Update values in systems connected via API integrations
  - API exports will return the new values
  - API imports with former incorrect values will result in an error
- Execute migration outside of business hours (workspace in read-only mode).
- Action required by July 1, 2023. Automatic migration after that date.

Change in GraphQL response

- Our GraphQL API currently provides results even if queries contain an invalid facet key
- Results include data meeting all other valid keys and ignore the invalid ones.
- This behavior was compliant with earlier GraphQL specifications but isn't anymore.



- From June 1, 2023, API returns an error and no result, if not all facet keys in facet filters are valid.
- Trailing brackets will result in syntax error.

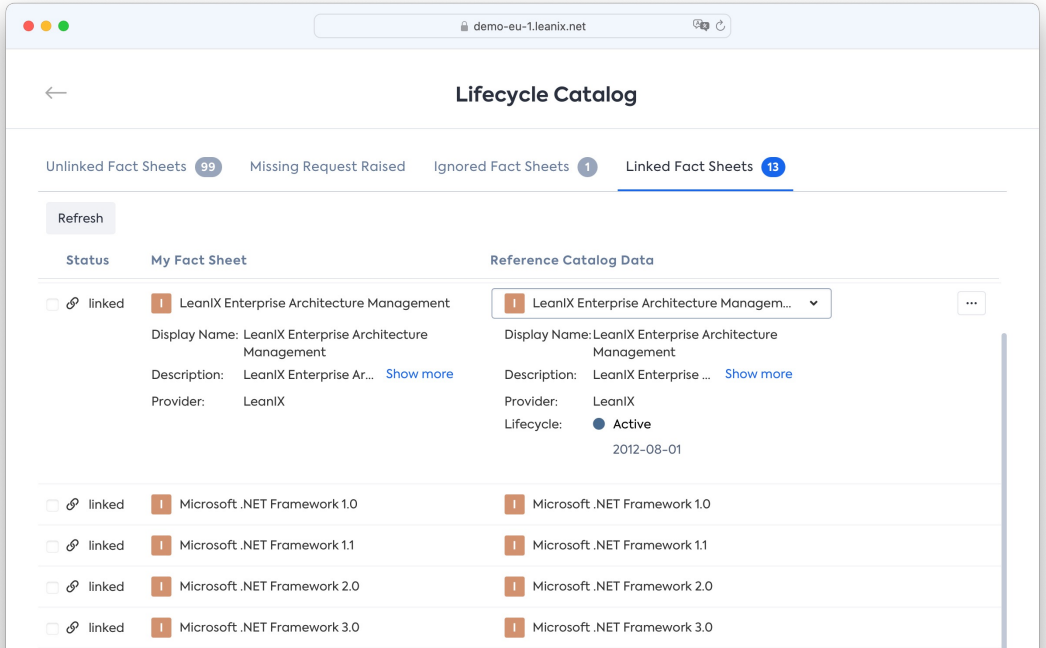
Update on Strategy for Reference Catalogs

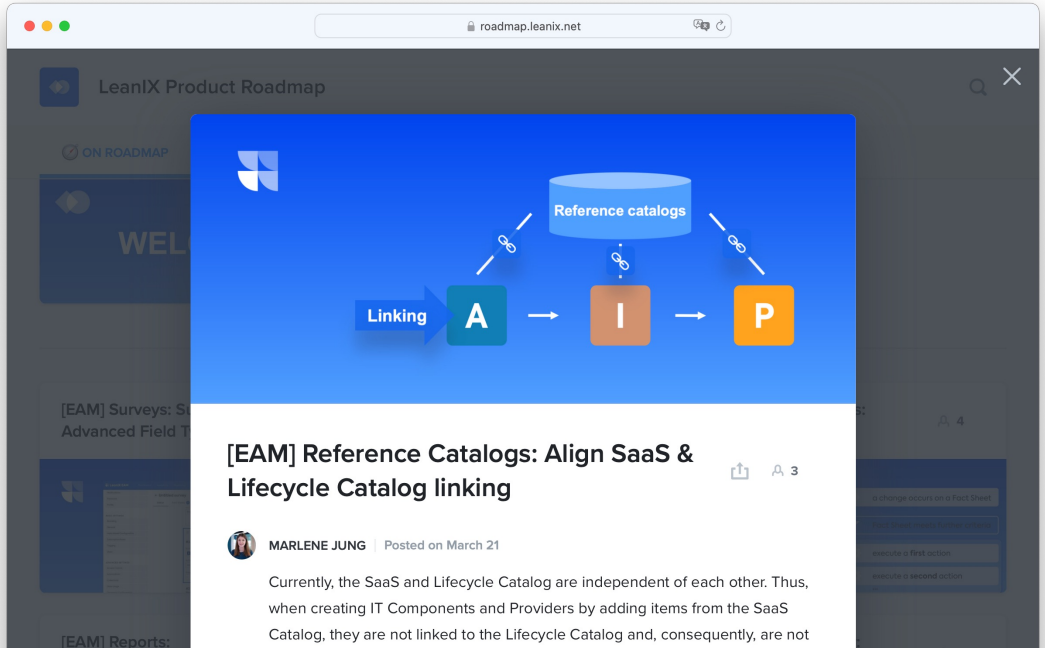
Transition to Europe

- Data Research Analysts hired and ramped-up in DE successfully
- Business continuity for Reference Catalog research ensured

Product development

- Focus for the next quarters will be to close gaps of existing functionality and improve the TRM user journey
- E.g., by aligning the SaaS and Lifecycle catalog functionality-wise

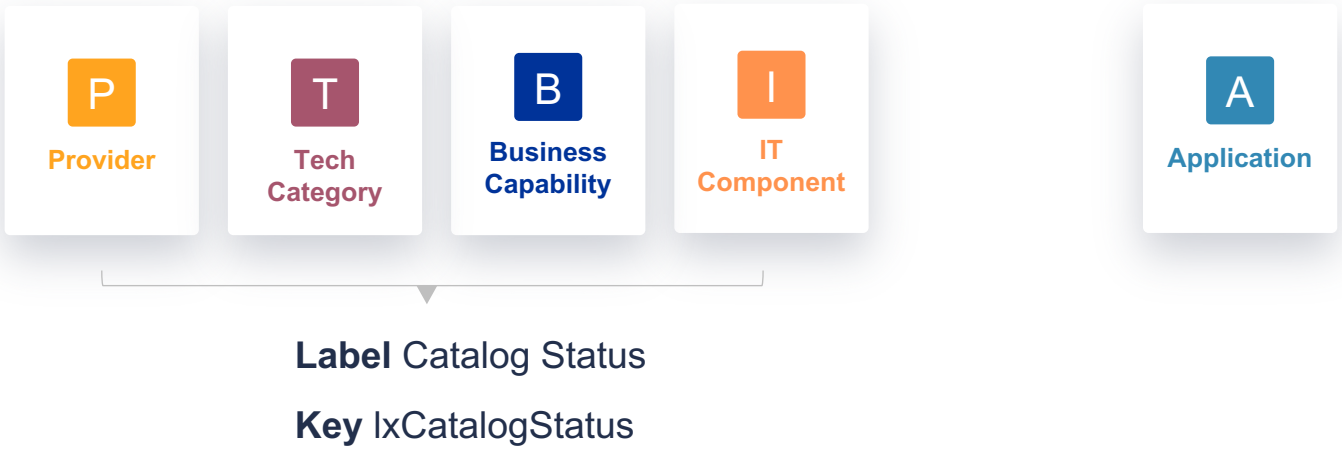




Meta Model changes for Reference Catalogs

New fields will be added to the Meta Model in support of provisioning and linking Fact Sheets to our catalogs for SaaS, Lifecycles, Tech Categories and Business Capabilities.

- by the end of Q2 2023
- As hidden, unused fields



Label	Key
Catalog Status	lxCatalogStatus
LXSIID	lxSiId
Catalog ID	lxCatalogId

Visible when SaaS Catalog active:

Product Category	lxProductCategory
Hosting Type	lxHostingType
Hosting Description	lxHostingDescription
SSO Availability	lxStatusSSO
SSO Providers	lxSsoProvider

Changes will be announced prior to roll-out again

Public

Other topics

Strategy on Diagrams

To be completed until end of Q2:

- Data Flow In progress
- Fact Sheet creation In progress
- Changing of Labels
- Drill-down / Show dependencies by filter
- Filtering on diagrams
- Exports in view mode
- Roll-up

Until end of Q2:
Every Admin can choose for their workspace:
- Completely move to new editor, OR
- Extend coexistence until end of Q3, 2023

Old editor will be removed at the end of Q3.

Strategy on Surveys

New survey response form is available

Next
- Extend Fact Sheet Elements
  - Lifecycles
  - Relations
  - Multiple-Select
  - Etc.
- **Then**: Remove Fact Sheet segments

- Introduce Safety Net
  - Survey creates more than 100 Notifications
    -> require approval / send warning

Mobile App

Mobile App is being shut down

Removal from store by June 30

Long-Term plan:
- Make Portals more accessible and more reactive

Value Stream Management

Christoph Walpert, Product Manager

April 27, 2023

Public

Service & API Catalogs build a strong foundation for your Value Stream Management

Reduce duplication of work & lack of trust

Single source of truth for your development organization

Understand & effectively reduce architecture complexity

Get your open-source risk under control with Software Bill of Materials (SBOM)

Open Source Risk
is undermanaged in
many corporations

6 months after log4j incident 72% vulnerabilities were not yet fixed

Loss of reputation

Higher costs & loss of business

Turn your tech stack into a competitive advantage for your business

Rapidly changing tech stack

Faster developments & simpler ramp-ups to use new tech stacks

Missing oversight & opportunity for guidance

SaaS Management Platform

SMP: SaaS Contract & Renewal Management

LeanIX

Why SaaS Contract Management is key for successful SaaS Management

360-degree view of all contracts

- Manage contract volume and cost
- Identify and prioritize key contracts impacting your budget
- Spot redundant services and turn it into an optimization opportunity

Stay on top of renewal processes

- Be ahead of renewal with automated alerts
- Ensure repeatable process for renewals and new purchases
- Enable collaboration across contract team

Plan and respect budgets

- Insights into current committed spend
- Simulate future spend to avoid overspending
- Stop costs for unwanted service
